MATHEMATICS CURRICULUM Grade 7

Curriculum Writers: Carol Charest and Deborah Downes

The North Smithfield Mathematics Curriculum for grades K-12 was completed in June 2013 by a K-12 team of teachers. The team, identified as the Mathematics Task Force and Mathematics Curriculum Writers referenced extensive resources to design the document that included:

- *Common Core State Standards for Mathematics*
- *Common Core State Standards for Mathematics, Appendix A*
- *Best Practice, New Standards for Teaching and Learning in America's Schools*
- *Classroom Instruction That Works*, Marzano
- Differentiated Instructional Strategies
- Goals for the district
- High School Traditional Plus Model Course Sequence, Achieve, Inc.
- Khan Academy
- Numerous state curriculum Common Core frameworks, e.g. Ohio Department of Education (ODE), Tucson Unified School District, Arizona (TUSD), New Jersey and Connecticut
- PARCC Model Content Frameworks
- The Illustrative Mathematics Project
- Third International Mathematics and Science TIMSS)
- *Understanding Common Core State Standards, Kendall*

The North Smithfield Mathematics Curriculum identifies what students should know and be able to do in mathematics. Each grade or course includes Common Core State Standards (CCSS), grade level Assessment problems, teacher notes, best practice instructional strategies, resources, a map (or suggested timeline), rubrics, checklists, and common formative and summative assessments.

COMMON CORE STATE STANDARDS

The **Common Core State Standards (CCSS)**:

- Are fewer, higher, deeper, and clearer.
- Are aligned with college and workforce expectations.
- Include rigorous content and applications of knowledge through high-order skills.
- Build upon strengths and lessons of current state standards (GLEs and GSEs).
- Are internationally benchmarked, so that all students are prepared for succeeding in our global economy and society.
- Are research and evidence-based.

Common Core State Standards components include:

- Standards for **Mathematical Practice** (K-12)
- Standards for **Mathematical Content**:
 - Categories (high school only): e.g. numbers, algebra, functions, data
 - Domains: larger groups of related standards
 - Clusters: groups of related standards
 - Standards: define what students should understand and are able to do

The **North Smithfield Common Core Mathematics Curriculum** provides all students with a sequential comprehensive education in mathematics through the study of:

- Standards for **Mathematical Practice** (K-12)
 - Make sense of problems and persevere in solving them
 - Reason abstractly and quantitatively
 - Construct viable arguments and critique the reasoning of others
 - Model with mathematics*
 - Use appropriate tools strategically
 - Attend to precision
 - Look for and make use of structure
 - Look for and express regularity in repeated reasoning

Mission Statement

To foster the success of all students,
our mission is to engage them
in a challenging mathematics curriculum,
driven by standards-based instruction and focused on
mathematical practices, skills, concepts, and problem solving.

MATHEMATICS CURRICULUM Grade 7

Curriculum Writers: Carol Charest and Deborah Downes

- Standards for **Mathematical Content:**
 - **K – 5 Grade Level Domains of**
 - Counting and Cardinality
 - Operations and Algebraic Thinking
 - Number and Operations in Base Ten
 - Number and Operations – Fractions
 - Measurement and Data
 - Geometry
 - **6-8 Grade Level Domains of**
 - Ratios and Proportional Relationships
 - The Number System
 - Expressions and Equations
 - Functions
 - Geometry
 - **9-12 Grade Level Conceptual Categories of**
 - Number and Quantity
 - Algebra
 - Functions
 - Modeling
 - Geometry
 - Statistics and Probability

RESEARCH-BASED INSTRUCTIONAL STRATEGIES

The North Smithfield Common Core Mathematics Curriculum provides a list of research-based **best practice instructional strategies** that the teacher may model and/or facilitate. It is suggested the teacher:

- Use **formative assessment** to guide instruction
- Use **Classroom Instruction That Works** (Marzano)
 - Setting objectives and providing feedback
 - Reinforcing effort and providing recognition
 - Cooperative learning
 - Cues, questions, and advance organizers
 - Nonlinguistic representations
 - Summarizing and note taking
 - Assigning homework and providing practice
 - Identifying similarities and differences
 - Generating and testing hypotheses
- Provide opportunities for **independent, partner and collaborative group work**
- Differentiate **instruction** by varying the **content, process, and product** and providing opportunities for:
 - anchoring
 - cubing
 - jig-sawing
 - pre/post assessments
 - tiered assignments
- Address **multiple intelligences** instructional strategies, e.g. visual, bodily kinesthetic, interpersonal
- Provide opportunities for **higher level thinking: Webb's Depth of Knowledge, 2,3,4**, skill/conceptual understanding, strategic reasoning, extended reasoning
- Facilitate the integration of **Mathematical Practices** in all content areas of mathematics
- Provide **rubrics and models**

MATHEMATICS CURRICULUM Grade 7

Curriculum Writers: Carol Charest and Deborah Downes

- Facilitate integration of the **Applied Learning Standards (SCANS)**:
 - communication
 - critical thinking
 - problem solving
 - reflection/evaluation
 - research
- Employ strategies of “best practice” (student-centered, experiential, holistic, authentic, expressive, reflective, social, collaborative, democratic, cognitive, developmental, constructivist/heuristic, and challenging)
- Address **multiple intelligences** and brain dominance (spatial, bodily kinesthetic, musical, linguistic, intrapersonal, interpersonal, mathematical/logical, and naturalist)
- Employ **mathematics best practice strategies** e.g.
 - using manipulatives
 - facilitating cooperative group work
 - discussing mathematics
 - questioning and making conjectures
 - justifying of thinking
 - writing about mathematics
 - facilitating problem solving approach to instruction
 - integrating content
 - using calculators and computers
 - facilitating learning
 - using assessment to modify instruction

COMMON ASSESSMENTS

The North Smithfield Common Core Mathematics Curriculum includes common assessments. Required (red ink) indicates the assessment is required of all students e.g. common tasks/units, standardized mid-term exam, standardized final exam.

- **REQUIRED COMMON ASSESSMENTS**
 - MID-TERM EXAM
 - FINAL EXAM
 - COMMON PROBLEMS/UNITS
- **Common Instructional Assessments (I)** - used by teachers and students during the instruction of CCSS.
- **Common Formative Assessments (F)** - used to measure how well students are mastering the content standards **before** taking state assessments
 - teacher and student use to make decisions about what actions to take to promote further learning
 - on-going, dynamic process that involves far more frequent testing
 - serves as a practice for students
- **Common Summative Assessment (S)** - used to measure the level of student, school, or program success
 - make some sort of judgment, e.g. what grade
 - program effectiveness
 - e.g. state assessments (AYP), mid-year and final exams
- Additional suggested assessments include:
 - Anecdotal records
 - Conferencing
 - Exhibits
 - Interviews
 - Graphic organizers
 - Journals
 - Mathematical Practices
 - Modeling
 - Multiple Intelligences assessments, e.g.
 - Role playing - bodily kinesthetic
 - Graphic organizing - visual
 - Collaboration - interpersonal
 - Oral presentations
 - Problem/Performance based/common tasks
 - Rubrics/checklists (mathematical practice, modeling)
 - Tests and quizzes
 - Technology
 - Think-alouds
 - Writing genres
 - Argument
 - Informative
 - Research

MATHEMATICS CURRICULUM Grade 7

CATEGORIES, DOMAINS, CLUSTERS	UNIT	STANDARDS/BENCHMARKS North Smithfield School Department	INSTRUCTIONAL STRATEGIES	RESOURCES	ASSESSMENTS																
		<ul style="list-style-type: none"> Unit rate is the slope of a proportional relationship that, when graphed, is a linear equation that goes through the origin. Linear equations when graphed are straight lines. Every point on a graph of a proportional relationship has a meaning in terms of the situation. <p>Examples and Explanation</p> <ul style="list-style-type: none"> A student is making trail mix. Create a graph to determine if the quantities of nuts and fruit are proportional for each serving size listed in the table. If the quantities are proportional, what is the constant of proportionality or unit rate that defines the relationship? Explain how you determined the constant of proportionality and how it relates to both the table and graph. <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>Serving Size</th> <th>1</th> <th>2</th> <th>3</th> <th>4</th> </tr> </thead> <tbody> <tr> <td>Cups of Nuts (x)</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> </tr> <tr> <td>Cups of Fruit (y)</td> <td>2</td> <td>4</td> <td>6</td> <td>8</td> </tr> </tbody> </table> <div style="text-align: center; margin: 10px 0;"> </div> <p>The relationship is proportional. For each of the other serving sizes there are 2 cups of fruit for every 1 cup of nuts (2:1).</p> <p>The constant of proportionality is shown in the first column of the table and by the slope of the line on the graph.</p> <ul style="list-style-type: none"> The graph below represents the cost of gum packs as a unit rate of \$2 dollars for every pack of gum. The unit rate is represented as \$2/pack. Represent the relationship using a table and an equation. <div style="text-align: center; margin: 10px 0;"> <p style="text-align: right;">(TUSD)</p> </div>	Serving Size	1	2	3	4	Cups of Nuts (x)	1	2	3	4	Cups of Fruit (y)	2	4	6	8	<p>and quantitatively</p> <ul style="list-style-type: none"> Construct viable arguments and critique the reasoning of others Model with mathematics ★ Use appropriate tools strategically Attend to precision Look for and make use of structure Look for and express regularity in repeated reasoning 	<p>continue to follow the thinking involved with rates and proportions. Solutions to problems can be found by using the same strategies for solving rates, such as looking for equivalent ratios or based upon understandings of decimals. Previously, percents have focused on "out of 100"; now percents above 100 are encountered.</p> <ul style="list-style-type: none"> Providing opportunities to solve problems based within contexts that are relevant to seventh graders will connect meaning to rates, ratios and proportions. Examples include: researching newspaper ads and constructing their own question(s), keeping a log of prices (particularly sales) and determining savings by purchasing items on sale, timing students as they walk a lap on the track and figuring their rates, creating open-ended problem scenarios with and without numbers to give students the opportunity to demonstrate conceptual understanding, inviting students to create a similar problem to a given problem and explain their reasoning. (ODE) 	<p>m/index.asp</p> <ul style="list-style-type: none"> www.commoncore.org/maps www.corestandards.org www.khanacademy.com www.ride.ri.gov <p>Materials</p> <ul style="list-style-type: none"> Advertisements in newspapers Graph paper Road maps Unlimited manipulatives or tools (don't restrict the tools to one or two, give students many options) 	<ul style="list-style-type: none"> Oral presentations Problem/Performance based/common tasks Rubrics/checklists (mathematical practice, modeling) Tests and quizzes Technology Think-alouds Writing genres <ul style="list-style-type: none"> <input type="checkbox"/> Argument <input type="checkbox"/> Informative <input type="checkbox"/> Research

	M	<p>Table:</p> <table border="1" style="margin-left: 20px; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">Number of Packs of Gum (g)</th> <th style="text-align: left;">Cost in Dollars (d)</th> </tr> </thead> <tbody> <tr><td>0</td><td>0</td></tr> <tr><td>1</td><td>2</td></tr> <tr><td>2</td><td>4</td></tr> <tr><td>3</td><td>6</td></tr> <tr><td>4</td><td>8</td></tr> </tbody> </table> <p>Equation: $d = 2g$, where d is the cost in dollars and g is the packs of gum</p> <ul style="list-style-type: none"> • If total cost t is proportional to the number n of items purchased at a constant price p, the relationship between the total cost and the number of items can be expressed as $t = pn$. • A common error is to reverse the position of the variables when writing equations. Students may find it useful to use variables specifically related to the quantities rather than using x and y. Constructing verbal models can also be helpful. A student might describe the situation as “the number of packs of gum times the cost for each pack is the total cost in dollars”. They can use this verbal model to construct the equation. Students can check their equation by substituting values and comparing their results to the table. The checking process helps student revise and recheck their model as necessary. The number of packs of gum times the cost for each pack is the total cost ($g \times 2 = d$). (TUSD) <p>7.RP.3 Use proportional relationships to solve multistep ratio and percent problems. Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error. Major content</p> <p>Essential knowledge and skills</p> <ul style="list-style-type: none"> • Ratio can be extended into solving single and multi-step proportionality problems and percent problems. <p>Examples and Explanation</p> <ul style="list-style-type: none"> • Gas prices are projected to increase 124% by April 2015. A gallon of gas currently costs \$4.17. What is the projected cost of a gallon of gas for April 2015? • A student might say: “The original cost of a gallon of gas is \$4.17. An increase of 100% means that the cost will double. I will also need to add another 24% <p>Mathematical Practices</p> <ul style="list-style-type: none"> • Model with mathematics ★ • Use appropriate tools strategically • Attend to precision • Look for and make use of structure 	Number of Packs of Gum (g)	Cost in Dollars (d)	0	0	1	2	2	4	3	6	4	8

	M	<p>Essential knowledge and skills</p> <ul style="list-style-type: none"> When opposites are combined the sum is always 0. A positive number is represented by moving right on a number line, a negative number is represented moving left on a number line. Absolute value is the distance that number is away from zero on a number line, also referred to as the magnitude of a number in real-world contexts. Addition of rational numbers ($p + q$) is the number located a distance q from p, in the positive or negative direction depending on whether q is positive or negative. Subtraction of rational numbers is the same as adding the additive inverse, $p - q = p + (-q)$. Distance between two rational numbers on the number line is the absolute value of their difference. <p>Examples and Explanation</p> <ul style="list-style-type: none"> A hydrogen atom has 0 charge because its two constituents are oppositely charged. You have \$4 and you need to pay a friend \$3. What will you have after paying your friend? $4 + (-3) = 1$ or $(-3) + 4 = 1$ <div style="text-align: center;"> </div> <p>7.NS.2 Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers. Major content</p> <p>a. Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts. (7.NS.2a)</p> <p>b. Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $- \frac{p}{q} = \frac{-p}{q} = \frac{p}{-q}$. Interpret quotients of rational numbers by describing real world contexts. (7.NS.2b)</p>	<p><i>number line,</i></p> <ul style="list-style-type: none"> <i>the absolute value is the magnitude for a positive or negative quantity, and</i> <i>locating and comparing locations on a coordinate grid by using negative and positive numbers.</i> <ul style="list-style-type: none"> <i>Using both contextual and numerical problems, students should explore what happens when negatives and positives are combined. Number lines present a visual image for students to explore and record addition and subtraction results. Two-color counters or colored chips can be used as a physical and kinesthetic model for adding and subtracting integers. With one color designated to represent positives and a second color for negatives, addition/subtraction can be represented by placing the appropriate numbers of chips for the addends and their signs on a board. Using the notion of opposites, the board is simplified by removing pairs of opposite colored chips. The answer is the total of the remaining chips with the sign representing the appropriate color.</i> 	<p>Websites</p> <ul style="list-style-type: none"> http://curriculum.northsmithfieldschools.com http://www.achieve.org/http://my.hrw.com http://www.illustrativemathematics.org/standards/practice http://www.ode.state.oh.us/GD/Templates/Pages/ODE/ODEDefaultPage.aspx?page=1 http://www.parcconline.org/sites/parcc/files/PARCC%20Math%20S http://www.tusd1.org/contents/distinfo/curriculum/index.asp www.commoncore.org/maps www.corestandards.org www.khanacademy.com www.ride.ri.gov <p>Materials</p> <ul style="list-style-type: none"> Assorted fraction models Calculators Dice/number cubes Number lines Two-color counters Virtual manipulatives 	<ul style="list-style-type: none"> Journals Mathematical Practices Modeling ★ Multiple Intelligences assessments, e.g. <ul style="list-style-type: none"> Role playing - bodily kinesthetic Graphic organizing - visual Collaboration - interpersonal Oral presentations Problem/Performance based/common tasks Rubrics/checklists (mathematical practice, modeling) Tests and quizzes Technology Think-alouds Writing genres <ul style="list-style-type: none"> Argument Informative Research

CATEGORIES, DOMAINS, CLUSTERS	UNIT	STANDARDS/BENCHMARKS North Smithfield School Department	INSTRUCTIONAL STRATEGIES	RESOURCES	ASSESSMENTS
	M	<p>• Solution: $3(2x+5)$, therefore each side is $2x+5$ units long.</p> <p>7.EE.2 Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related.</p> <p>Major content</p> <ul style="list-style-type: none"> ○ For example, $a + 0.05a = 1.05a$ means that “increase by 5%” is the same as “multiply by 1.05.” <p>Essential knowledge and skills</p> <ul style="list-style-type: none"> • Different forms of equivalent expression show different aspects of a problem. • Expressions and equations can be written in different forms depending on the context of the problem and how the quantities within it are related. <p>Examples and Explanation Examples:</p> <ul style="list-style-type: none"> • Jamie and Ted both get paid an equal hourly wage of \$9 per hour. This week, Ted made an additional \$27 dollars in overtime. Write an expression that represents the weekly wages of both if J = the number of hours that Jamie worked this week and T = the number of hours Ted worked this week? Can you write the expression in another way? • Example, $a + 0.05a = 1.05a$ means that “increase by 5%” is the same as “multiply by 1.05.” Students may create several different expressions depending upon how they group the quantities in the problem. One student might say: To find the total wage, I would first multiply the number of hours Jamie worked by 9. Then I would multiply the number of hours Ted worked by 9. I would add these two values with the \$27 overtime to find the total wages for the week. The student would write the expression $9J + 9T + 27$. Another student might say: To find the total wages, I would add the number of hours that Ted and Jamie worked. I would multiply the total number of hours worked by 9. I would then add the overtime to that value to get the total wages for the week. The student would write the expression $9(J + T) + 27$ 	<p><i>expressions using variables to represent situations and use the properties of operations to generate equivalent expressions. These expressions may look different and use different numbers, but the values of the expressions are the same.</i></p> <ul style="list-style-type: none"> • Provide opportunities for students to experience expressions for amounts of increase and decrease. In Standard 2, the expression is rewritten and the variable has a different coefficient. In context, the coefficient aids in the understanding of the situation. Another example is this situation which represents a 10% decrease: $b - 0.10b = 1.00b - 0.10b$ which equals $0.90b$ or 90% of the amount. • One method that students can use to become convinced that expressions are equivalent is by substituting a numerical value for the variable and evaluating the expression. For example $5(3 + 2x)$ is equal to $5 \bullet 3 + 5 \bullet 2x$. Let $x = 6$ and substitute 6 for x in both equations. 	<ul style="list-style-type: none"> • Interactive boards <p>Websites</p> <ul style="list-style-type: none"> • http://curriculum.northsmithfieldschools.com • http://www.achieve.org/http://my.hrw.com • http://www.illustrativemathematics.org/standards/practice • http://www.ode.state.oh.us/GD/Templates/Pages/ODE/ODEDefaultPage.aspx?page=1 • http://www.parcconline.org/sites/parcc/files/PARCC%20Math%20S • http://www.tusd1.org/content/distinfo/curriculum/index.asp • www.commoncore.org/maps • www.corestandards.org • www.khanacademy.com • www.ride.ri.gov <p>Materials</p> <ul style="list-style-type: none"> • Algebra tiles or on-line • Algebra tiles • Calculators 	<ul style="list-style-type: none"> • Graphic organizers • Journals • Mathematical Practices • Modeling ★ • Multiple Intelligences assessments, e.g. <ul style="list-style-type: none"> □ Role playing - bodily □ kinesthetic □ Graphic organizing - visual □ Collaboration - interpersonal • Oral presentations • Problem/Performance based/common tasks • Rubrics/checklists (mathematical practice, modeling) • Tests and quizzes • Technology • Think-alouds • Writing genres <ul style="list-style-type: none"> □ Argument □ Informative □ Research

<p>persevere in solving them</p> <ul style="list-style-type: none"> <input type="checkbox"/> Reason abstractly and quantitatively <input type="checkbox"/> Construct viable arguments and critique the reasoning of others <input type="checkbox"/> Model with mathematics ★ <input type="checkbox"/> Use appropriate tools strategically <input type="checkbox"/> Attend to precision <input type="checkbox"/> Look for and make use of structure <input type="checkbox"/> Look for and express regularity in repeated reasoning 	A	<p>Examples and Explanation Examples:</p> <ul style="list-style-type: none"> • The seventh grade class is building a mini golf game for the school carnival. The end of the putting green will be a circle. If the circle is 10 feet in diameter, how many square feet of grass carpet will they need to buy to cover the circle? How might you communicate this information to the salesperson to make sure you receive a piece of carpet that is the correct size? • Students measure the circumference and diameter of several circular objects in the room (clock, trash can, door knob, wheel, etc.). Students organize their information and discover the relationship between circumference and diameter by noticing the pattern in the ratio of the measures. Students write an expression that could be used to find the circumference of a circle with any diameter and check their expression on other circles. • Students will use a circle as a model to make several equal parts as you would in a pie model. The greater number the cuts, the better. The pie pieces are laid out to form a shape similar to a parallelogram. Students will then write an expression for the area of the parallelogram related to the radius (note: the length of the base of the parallelogram is half the circumference, or πr, and the height is r, resulting in an area of πr^2. Extension: If students are given the circumference of a circle, could they write a formula to determine the circle's area or given the area of a circle, could they write the formula for the circumference? (TUSD) <div style="text-align: center;">  </div> <p>7.G.5 Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure. Additional content</p> <p>Essential knowledge and skills</p> <ul style="list-style-type: none"> • Equations can be written and used to find the value of missing angles in multi-step problems involving <p>Mathematical Practices</p> <ul style="list-style-type: none"> • Construct viable arguments and 	<p>relationships between radius, diameter, circumference, π and area. Students can observe this by folding a paper plate several times, finding the center at the intersection, then measuring the lengths between the center and several points on the circle, the radius. Measuring the folds through the center, or diameters leads to the realization that a diameter is two times a radius. Given multiple-size circles, students should then explore the relationship between the radius and the length measure of the circle (circumference) finding an approximation of π and ultimately deriving a formula for circumference. String or yarn laid over the circle and compared to a ruler is an adequate estimate of the circumference. This same process can be followed in finding the relationship between the diameter and the area of a circle by using grid paper to estimate the area.</p> <ul style="list-style-type: none"> • Another visual for understanding the area of a circle can be modeled by cutting up a paper plate into 16 pieces along diameters 	<p>Muschla et. al</p> <p><u>Supplementary Books, Teacher (T) Student (S)</u></p> <ul style="list-style-type: none"> • <p><u>Technology</u></p> <ul style="list-style-type: none"> • Computers • LCD projectors • Interactive boards <p><u>Websites</u></p> <ul style="list-style-type: none"> • http://curriculum.northsmithfieldschools.com • http://www.achieve.org/http://my.hrw.com • http://www.illustrativemathematics.org/standards/practice • http://www.ode.state.oh.us/GD/Templates/Pages/ODE/ODEDefaultPage.aspx?page=1 • http://www.parcconline.org/sites/parcc/files/PARCC%20Math%20S • http://www.tusd1.org/contents/distinfo/curriculum/index.asp • www.commoncore.org/maps • www.corestandards.org • www.khanacademy.com • www.ride.ri.gov <p><u>Materials</u></p> <ul style="list-style-type: none"> • circular objects of several different sizes • compasses • grid paper • paper plates • protractors • scissors • string or yarn • tape measures, rulers 	<p><u>SUMMATIVE ASSESSMENTS</u></p> <ul style="list-style-type: none"> • Anecdotal records • Conferencing • Exhibits • Interviews • Graphic organizers • Journals • Mathematical Practices • Modeling ★ • Multiple Intelligences assessments, e.g. <ul style="list-style-type: none"> <input type="checkbox"/> Role playing - bodily kinesthetic <input type="checkbox"/> Graphic organizing - visual <input type="checkbox"/> Collaboration - interpersonal • Oral presentations • Problem/Performance based/common tasks • Rubrics/checklists (mathematical practice, modeling) • Tests and quizzes • Technology

<ul style="list-style-type: none"> <input type="checkbox"/> Use appropriate tools strategically <input type="checkbox"/> Attend to precision <input type="checkbox"/> Look for and make use of structure <input type="checkbox"/> Look for and express regularity in repeated reasoning 		<p>Examples and Explanation Example:</p> <ul style="list-style-type: none"> • Jason wanted to compare the mean height of the players on his favorite basketball and soccer teams. He thinks the mean height of the players on the basketball team will be greater but doesn't know how much greater. He also wonders if the variability of heights of the athletes is related to the sport they play. He thinks that there will be a greater variability in the heights of soccer players as compared to basketball players. He used the rosters and player statistics from the team websites to generate the following lists. • Basketball Team – Height of Players in inches for 2010-2011 Season 75, 73, 76, 78, 79, 78, 79, 81, 80, 82, 81, 84, 82, 84, 80, 84 • Soccer Team – Height of Players in inches for 2010 73, 73, 73, 72, 69, 76, 72, 73, 74, 70, 65, 71, 74, 76, 70, 72, 71, 74, 71, 74, 73, 67, 70, 72, 69, 78, 73, 76, 69 • To compare the data sets, Jason creates a two dot plots on the same scale. The shortest player is 65 inches and the tallest players are 84 inches <div style="text-align: center;">  <p>Height of Soccer Players (in)</p> <p>Height of Basketball Players (in)</p> </div> <ul style="list-style-type: none"> • In looking at the distribution of the data, Jason observes that there is some overlap between the two data sets. Some players on both teams have players between 73 and 78 inches tall. Jason decides to use the mean and mean absolute deviation to compare the data sets. Jason sets up a table for each data set to help him with the calculations. 	<ul style="list-style-type: none"> • Reason abstractly and quantitatively • Construct viable arguments and critique the reasoning of others • Model with mathematics ★ • Use appropriate tools strategically • Attend to precision • Look for and make use of structure 	<ul style="list-style-type: none"> • Provide opportunities for students to deal with small populations, determining measures of center and variability for each population. Then have students compare those measures and make inferences. The use of graphical representations of the same data (Grade 6) provides another method for making comparisons. Students begin to develop understanding of the benefits of each method by analyzing data with both methods. • When students study large populations, random sampling is used as a basis for the population inference. This build on the skill developed in the Grade 7 cluster "Use random sampling to draw inferences about a population" of Statistics and Probability. Measures of center and variability are used to make inferences on each of the general populations. Then the students have make comparisons for the two populations based on those inferences. • This is a great opportunity to have students examine how different inferences can be made based on the same two sets of data. Have students investigate how advertising agencies uses data to persuade customers to use their products. Additionally, provide students with two populations and have them use the data to persuade both sides of an argument. 	<ul style="list-style-type: none"> • Technology <ul style="list-style-type: none"> • Computers • LCD projectors • Interactive boards • Websites <ul style="list-style-type: none"> • http://curriculum.northsmithfieldschools.com • http://www.achieve.org/http://my.hrw.com • http://www.illustrativemathematics.org/standards/practice • http://www.ode.state.oh.us/GD/Templates/Pages/ODE/ODEDefaultPage.aspx?page=1 • http://www.parcconline.org/sites/parcc/files/PARCC%20Math%20S • http://www.tusd1.org/content/distinfo/curriculum/index.asp • www.commoncore.org/maps • www.corestandards.org • www.khanacademy.com • www.ride.ri.gov • Materials 	<ul style="list-style-type: none"> • Conferencing • Exhibits • Interviews • Graphic organizers • Journals • Mathematical Practices • Modeling ★ • Multiple Intelligences assessments, e.g. <ul style="list-style-type: none"> <input type="checkbox"/> Role playing - bodily <input type="checkbox"/> kinesthetic <input type="checkbox"/> Graphic organizing - visual <input type="checkbox"/> Collaboration - interpersonal • Oral presentations • Problem/Performance based/common tasks • Rubrics/checklists (mathematical practice, modeling) • Tests and quizzes • Technology • Think-alouds • Writing genres <ul style="list-style-type: none"> <input type="checkbox"/> Argument

		<ul style="list-style-type: none"> The mean height of the basketball players is 79.75 inches as compared to the mean height of the soccer players at 72.07 inches, a difference of 7.68 inches. The mean absolute deviation (MAD) is calculated by taking the mean of the absolute deviations for each data point. The difference between each data point and the mean is recorded in the second column of the table. Jason used rounded values (80 inches for the mean height of basketball players and 72 inches for the mean height of soccer players) to find the differences. The absolute deviation, absolute value of the deviation, is recorded in the third column. The absolute deviations are summed and divided by the number of data points in the set. <p>The mean absolute deviation is 2.14 inches for the basketball players and 2.53 for the soccer players. These values indicate moderate variation in both data sets. There is slightly more variability in the height of the soccer players. The difference between the heights of the teams is approximately 3 times the variability of the data sets ($7.68 \div 2.53 = 3.04$).</p> <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th colspan="3">Soccer Players (n = 29)</th> <th colspan="3">Basketball Players (n = 16)</th> </tr> <tr> <th>Height (in)</th> <th>Deviation from Mean (in)</th> <th>Absolute Deviation (in)</th> <th>Height (in)</th> <th>Deviation from Mean (in)</th> <th>Absolute Deviation (in)</th> </tr> </thead> <tbody> <tr><td>65</td><td>-7</td><td>7</td><td>73</td><td>-7</td><td>7</td></tr> <tr><td>67</td><td>-5</td><td>5</td><td>75</td><td>-5</td><td>5</td></tr> <tr><td>69</td><td>-3</td><td>3</td><td>76</td><td>-4</td><td>4</td></tr> <tr><td>69</td><td>-3</td><td>3</td><td>78</td><td>-2</td><td>2</td></tr> <tr><td>69</td><td>-3</td><td>3</td><td>78</td><td>-2</td><td>2</td></tr> <tr><td>70</td><td>-2</td><td>2</td><td>79</td><td>-1</td><td>1</td></tr> <tr><td>70</td><td>-2</td><td>2</td><td>79</td><td>-1</td><td>1</td></tr> <tr><td>70</td><td>-2</td><td>2</td><td>80</td><td>0</td><td>0</td></tr> <tr><td>71</td><td>-1</td><td>1</td><td>80</td><td>0</td><td>0</td></tr> <tr><td>71</td><td>-1</td><td>1</td><td>81</td><td>1</td><td>1</td></tr> <tr><td>71</td><td>-1</td><td>1</td><td>81</td><td>1</td><td>1</td></tr> <tr><td>72</td><td>0</td><td>0</td><td>82</td><td>2</td><td>2</td></tr> <tr><td>72</td><td>0</td><td>0</td><td>82</td><td>2</td><td>2</td></tr> <tr><td>72</td><td>0</td><td>0</td><td>84</td><td>4</td><td>4</td></tr> <tr><td>72</td><td>0</td><td>0</td><td>84</td><td>4</td><td>4</td></tr> <tr><td>73</td><td>+1</td><td>1</td><td>84</td><td>4</td><td>4</td></tr> <tr><td>73</td><td>+1</td><td>1</td><td></td><td></td><td></td></tr> <tr><td>73</td><td>+1</td><td>1</td><td></td><td></td><td></td></tr> <tr><td>74</td><td>+2</td><td>2</td><td></td><td></td><td></td></tr> <tr><td>74</td><td>+2</td><td>2</td><td></td><td></td><td></td></tr> <tr><td>74</td><td>+2</td><td>2</td><td></td><td></td><td></td></tr> <tr><td>74</td><td>+2</td><td>2</td><td></td><td></td><td></td></tr> <tr><td>76</td><td>+4</td><td>4</td><td></td><td></td><td></td></tr> <tr><td>76</td><td>+4</td><td>4</td><td></td><td></td><td></td></tr> <tr><td>76</td><td>+4</td><td>4</td><td></td><td></td><td></td></tr> <tr><td>78</td><td>+6</td><td>6</td><td></td><td></td><td></td></tr> <tr><td>78</td><td>+6</td><td>6</td><td></td><td></td><td></td></tr> <tr><td>$\Sigma = 2090$</td><td></td><td>$\Sigma = 62$</td><td>$\Sigma = 1276$</td><td></td><td>$\Sigma = 40$</td></tr> </tbody> </table> <p>Mean = $2090 \div 29 = 72$ inches Mean = $1276 \div 16 = 79.75$ inches MAD = $62 \div 29 = 2.13$ inches MAD = $40 \div 16 = 2.5$ inches</p>	Soccer Players (n = 29)			Basketball Players (n = 16)			Height (in)	Deviation from Mean (in)	Absolute Deviation (in)	Height (in)	Deviation from Mean (in)	Absolute Deviation (in)	65	-7	7	73	-7	7	67	-5	5	75	-5	5	69	-3	3	76	-4	4	69	-3	3	78	-2	2	69	-3	3	78	-2	2	70	-2	2	79	-1	1	70	-2	2	79	-1	1	70	-2	2	80	0	0	71	-1	1	80	0	0	71	-1	1	81	1	1	71	-1	1	81	1	1	72	0	0	82	2	2	72	0	0	82	2	2	72	0	0	84	4	4	72	0	0	84	4	4	73	+1	1	84	4	4	73	+1	1				73	+1	1				74	+2	2				74	+2	2				74	+2	2				74	+2	2				76	+4	4				76	+4	4				76	+4	4				78	+6	6				78	+6	6				$\Sigma = 2090$		$\Sigma = 62$	$\Sigma = 1276$		$\Sigma = 40$			<input type="checkbox"/> Informative <input type="checkbox"/> Research

(An example would be 3 green marbles, 6 blue marbles, 3 blue marbles.) • Students try the experiment and compare their predictions to the experimental outcomes to continue to explore and refine conjectures about theoretical probability. • When rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times. (TUSD) <p>7.SP.7 Develop a probability model and use it to find probabilities of events.</p> <p>Supporting content Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy.</p> <p>a. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events.</p> <ul style="list-style-type: none"> ○ For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected. (7.SP.7a) <p>b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process.</p> <ul style="list-style-type: none"> ○ For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies? (7.SP.7b) <p>Essential knowledge and skills</p> <ul style="list-style-type: none"> • Actual probabilities, simple or compound, are the fraction of outcomes in the sample space for which the event or compound event occurs. • The more times an experiment or simulation is done the closer the chance probability should be to the actual probability, simple or compound <p>Mathematical Practices</p> <ul style="list-style-type: none"> • Make sense of problems and persevere in solving them • Reason abstractly 	<p><i>probability models to be used to find the probability of events. Provide students with models of equal outcomes and models of not equal outcomes are developed to be used in determining the probabilities of events.</i></p> <ul style="list-style-type: none"> • <i>Students should begin to expand the knowledge and understanding of the probability of simple events, to find the probabilities of compound events by creating organized lists, tables and tree diagrams. This helps students create a visual representation of the data; i.e., a sample space of the compound event. From each sample space, students determine the probability or fraction of each possible outcome. Students continue to build on the use of simulations for simple probabilities and now expand the simulation of compound probability.</i> • <i>Providing opportunities for students to match situations and sample spaces assists students in visualizing the sample spaces for situations.</i> (ODE)

	S	<p>Examples and Explanation Example:</p> <ul style="list-style-type: none"> If a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected. If you choose a point in the square, what is the probability that it is not in the circle?  <ul style="list-style-type: none"> Find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies? (TUSD) <p>7.SP.8 Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. Supporting content</p> <ol style="list-style-type: none"> Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. (7.SP.8a) Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event. (7.SP.8b) Design and use a simulation to generate frequencies for compound events. <ul style="list-style-type: none"> For example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood? (7.SP.8c) <p>Essential knowledge and skills</p> <ul style="list-style-type: none"> Sample spaces for compound events are represented using organized lists, tables and tree diagrams. <p>Examples and Explanation Examples:</p> <ul style="list-style-type: none"> Students conduct a bag pull experiment. A bag <p>Mathematical Practices</p> <ul style="list-style-type: none"> Make sense of problems and persevere in solving them Reason abstractly and quantitatively 	<ul style="list-style-type: none"> and quantitatively Construct viable arguments and critique the reasoning of others Model with mathematics ★ Use appropriate tools strategically Attend to precision Look for and make use of structure Look for and express regularity in repeated reasoning
